### **Supplemental Action**

This Supplemental Action replaces the Office Action filed 16 November 2007 to address the Preliminary Amendment filed 02 April 2004 which cancelled claims 1-10.

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 11-21, drawn to a portable printer comprising a lens part for forming an image of the image display part of the external device onto the print medium, the lens part being provided between the external device chamber and an optical print part, classified in class 347, subclass 105.
- II. Claims 22-32, drawn to a portable printer comprising a printer part that prints an image on a printer medium in accordance with image data input from the portable communication terminal via a first and second connector, classified in class 455, subclass 557.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are directed to related products. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed are materially different

products and functions. Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
